

ABSTRACT OF THE DISCLOSURE

New pattern reading glasses are provided of the present invention. The reading glasses indicate lenses put into a lens frame of single vision reading glasses. An optical center of lenses located at the cutting line of an upper rim of the lenses, which ranges from 2mm above and 2mm below thereof. With the single vision reading glasses, no matter if your are looking at close scenery by the lenses or looking at distant scenery by the naked eye, the variation of interlaced images is reduced when an image is watched by the naked eye and by lenses alternately. Therefore, the reading glasses provide more comfortable eyesight.
